

Benefits of the Sonoclot Coagulation & Platelet Function Analyzer

The Sonoclot Analyzer saves you time.

- It takes less time to run a Sonoclot test than other coagulation tests.
- Results are available faster than other coagulation tests

The Sonoclot Analyzer provides more information.

- One test provides information on coagulation factors, fibrinogen, and platelet function.
- A Sonoclot test provides information previously obtained from the coag lab within minutes at the point of care.

The Sonoclot Analyzer saves you money.

- One Sonoclot test costs between \$2-5 per test.
- Information from one Sonoclot test can prevent unnecessary administration of blood products or re-exploratory surgery.

The Sonoclot Analyzer simplifies data/patient management.

- Signature Viewer Data Collection Software allows you to effectively collect, manage, and store patient information for easy reference and storage.

How the Sonoclot Analyzer compares to the TEG

- Comparable information on coagulation factors, fibrinogen and platelet function
- Simple sample procedures, no pipettes required.
- Sonoclot results are available faster than TEG results due to the greater sensitivity of the Sonoclot Analyzer's detection mechanism.
- The Sonoclot Analyzer, due to its ability to monitor the entire coagulation process, is a versatile tool in a variety of applications and is approved by the FDA as both an ACT and a Platelet Function analyzer.
- Phases of the Sonoclot Signature directly correlate to hemostatic phases, therefore targeting specific coagulopathies and forms of treatment.
